On May 30, 2005 this sequence version replaced gi:63253308.
Sequencing is completed to a minimum standard of double strand
coverage with a minimum of 2 clones and 2 reads with no ambiguities
or 2 chemistries with a minimum of 2 clones and 3 reads with no
ambiguities. If the sequence quality does not meet this standard,
it will be indicated in the annotation. Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Worley, K.C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COMMENT
                                                                                                                                                                                                                                                                                                                               This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORNPEP; Information on the WORNWEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep clone-derived Zebrafish puc subclones occasionally display inconsistency over the length of monounclectide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Any regions longer than 1kb tagged as misc-feature 'unsure' are part of a tandem repeat of more than 10kb in length where it has not been possible to annofor the base differences between repeat copies. The region has been built up based on the repeat element to match the total size of repeat indicated by restriction digest, but repeat copies may not be in the correct order and the usual bKEY-SZKI is from a Zebrafish BAC library

On Nov 9, 2002 this sequence version replaced gi:22772470.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Worley, K.C.

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a "working draft' sequence It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole senome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23269749.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the estimated size. The sequence by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rattus norvegicus clone CH230-unknown, *** SEQUENCING IN PROGRESS 4**, 7 unordered pieces.

NOTE: This is a "working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrarty. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
    genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                    Center Clohe name: CH230-unknown
------ Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 206091 bases at least Q40
Consensus quality: 217431 bases at least Q30
Consensus quality: 217431 bases at least Q30
Estimated insert size: 219136; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
        shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2501: contig of 32501 bp in length

                                                                                                                                                                                         à
        and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            * NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

*NOTE: This is a "working draft" sequence. It currently

* Consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N. but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of il contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                     Submitted (12-5EP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Sep 22, 2002 this sequence version replaced gi:21731862.
The sequence in this assembly is a combination of BAC based reads and whole genome shocqun sequencing reads assembled using Atlas (http://www.ngsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigg that consist entirely of whole genome shocqun sequence reads. Both end sequences and whole genome shocqun sequence only contigs will be indicated in the feature table.

ORIGIN

```
The STS is derived from PCR amplicons generated from genomic DNA, sequenced from each end using the amplification primers. The sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next ten bases averaged a quality score of 20 or greater. Amplicon size was estimated by agarose gel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               354 bp DNA linear STS 30-JUN-2004

The STS is derived from PCR amplicons generated from genomic DNA, sequenced from each end using the amplification primers. The sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next ten bases averaged a quality score of 20 or greater. Amplicon size was estimated by agarose gel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BV104270 379 bp DNA linear STS 05-MAR-2004

MARC 3174-3175:966894323:1 RTS-1 Bos indicus x Bos taurus STS
genomic, sequence tagged site.
                                 The STS sequence represents a contig of the sequences derived from each end using the amplification primers to sequence. The sequence does not represent the entire amplicon, as sequence close to the primers was of low quality.

                                                                                                                      The STS is derived from PCR amplicons generated from genomic DNA, sequenced from each end using the amplification primers. The sequence does not necessarily represent the entire amplicon. Sequence derived from PolyPhred was trimmed from each end of each unique contig until five consecutive bases exceeded a quality score threshold of 20, and the next ten bases averaged a quality score electrophoresis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BCT 10-SEP-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A85941 SNEW WERE

annotated with alleles from the boxer and the breed or canid from
which the particular
read came. The validation rate for these SNPs was estimated at
approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs:

A second set of SNPs was generated using a similar methodology
except that the contigs
from the 1.5x poodle assembly (Kirkness 2003) were used instead of
wGS reads. Since this
sequence lacked base quality scores, arbitrary quality scores of
phred 40 were assigned base quality scores, arbitrary quality scores of
boxer assigned base quality scores, arbitrary quality scores of
boxer assigned out by SSAHA-SNP. 1637780 SNPs were annotated
with alleles from the
boxer and the poodle. The validation rate for these SNPs was
estimated at approximately TBD%.

Internal-WGA-discovery (I-WGA):

A third set of SNPs were discovered by comparing reads in the WGA
assembly. SNPs were
defined as mismatch positions that had a base quality of >= 30 on
both reads in a region
that allgned without gaps, and with at most one additional mismatch
in the ren flanking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in the ten flanking bases. For each allele, at least one additional read had to confirm
it. 731476 SNPs were
                                                                                                                                                                                                                                                                                   German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each) and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFaml.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 485941 SNPs were
                                                                                                                                                                                                        Protocol:
WGS-discovery (WGS):
Paired-end low-coverage whole genome shotgun reads were generated

```
The invention describes a new isolated polymucleotide (I) encoding a polypeptide with biological activity comprising: a nucleotide sequence of SEQ INOS: 1-567 (Fully defined); a nucleotide sequence that hybridizes to the sequence having greater than 99% sequence identity with the sequence of (i). Also described are: a(n) (expression) vector comprising (I); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polymucleotide in the host cell; an isolated polypeptide comprising a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide (is: a polypeptide encoded by (I); or a polypeptide encoded by a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide of (is: a polypeptide encoded by (I); or a polypeptide of (is) and a sequence of SEQ ID NOS: 1567; a composition comprising the polypeptide of (is) and a carrier; an antibody directed against the polypeptide of (is) and a carrier; an antibody directed against the polypeptide of (is) and a carrier; an antibody directed against the polypeptide of (is) and a carrier; an antibody directed against the polypeptide of (is) and a collypeptide of (is) and a collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising an of the sequences of SEQ ID NOS: 1-567. (I) is a polymucleotide of (is) and a collection of polymucleotides, where the collection comprising of a carrier; which comprises any of the amino acid sequence of SEQ ID NOS: 1-567. (I) is a polymucleotide with biological activity, which comprises any of the amino acid sequence of SEQ ID NOS: 1-567. (I) is a polymucleotide of (is) and activity, which are useful for treating a disease or disorders or other traits, in assessing biodiversity, and for producing many other composition and method are useful for treating a disease, birrah and product dependence of sequence or

The present invention describes human nucleic acid-associated proteins designated NAAP-1 to NAAP-57. The human NAAPs have cytostatic, antiarteriosclerotic, anti-HIV, antiallergic, cerebroprotective, antiparkinsonian, anticonvulsant, nootropic, neuroprotective, antinatentory, ophthalmological, thyromimetic, antiarthritic, hepatotropic, antibacterial, virucide, protozoacide, antiparasitic and implicate activities, and can be used in gene therapy. The NAAP protein and polymucleotide sequences can be used in gene therapy. The NAAP protein preventing diseases or conditions associated with the decreased expression or overexpression of NAAP, such as cell proliferative diseases (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (Parkinson's disease, Alzheimer's disease, stroke, epilepsy), developmental disorders (renal tubular acidosis, anaemia, glaucoma,
New human nucleic acid-associated proteins (NAAP), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant NAAP expression, e.g. cancer, hepatitis, AIDS, atherosclerosis,
                                                                                                                                                                                                                                                                                                                                                                human; nucleic acid-associated protein; NAAP; cytostatic; antiateriosclerotic; auti-HIV; antiallergic; cerebroprotective; antianteriosclerotic; auti-HIV; antiallergic; cerebroprotective; antiinflammatory; ophthalmological; thyromimetic; antiarthritic; hepatotropic; antibacterial; virucide; protozocacide; antiparastic; fungicide; gene therapy; cell proliferative disease; cancer; atherosclerosis; hepatitis; neurological disorder; Parkinson's disease; Alzheimer's disease; stroke; epilepsy; developmental disorder; renal tubular acidosis; anaemia; glaucoma; hypothyroidism; autoimmune disorder; inflammatory disorder; ADS; allergy; atopic dermatitis; arthritis; infection; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Forsythe IJ, Gorvad AE, Griffin JA;
